MEDIA-RESTAURANTS

© TM ®

are high quality Restaurants & Bookstores in former Coffee stores, **on main streets, in shopping malls, railroad stations, airports & other transport hubs – plus baseball, football, soccer and other sports stadia, theaters and other busy leisure & travel locations, which for decades have had to put up with sub-standard catering.**

Although the principal aim of our “Media-Restaurants” is the provision of quality meals, so that we give “best value” on main streets everywhere, they will also deliver unique & easy access on an unprecedented scale to all media networks thru

Google’s new **1GBPS** Optical Fiber & WiFi Broadband Networks, via

Apple’s* latest hardware, using the world’s best, fastest and easiest to use Search Engines – “GoogleNewton” G-Band machines.

MEDIA-RESTAURANTS

The profits we create from our revolutionary and unique media activities will allow us to subsidise our catering operations so that we can deliver “best value” on main streets and raise standards everywhere.

There are 4 principal “Media-Restaurant” brands :

© ™ ®

Full service Restaurants + Bookstores + Media Centers
delivering high quality catering & ambience in the middle price range and specially suitable for baseball, football, soccer and other sports venues, plus railroad stations, airports, other transportation hubs & shopping malls.

France’s most distinguished Michelin 3 Star Chef
will be co-operating with us on the admittedly difficult task of “recreating” his catering & ambience “standards” on a much wider scale – sometimes thousands of miles from his principal restaurant in central France – which will also be the training school for our own staff.

“Coffee alone” is not enough in costly Main Streets
today, in order to commercially justify very many coffee stores, and we are negotiating with Starbucks and others, with a view to upgrading some of their loss making outlets into fully fledged media-restaurants.

RAILROAD STATION + BOOKSTORE + 1GBPS MEDIA-RESTAURANT - REDLANDS, CA., MAY 2013

POWERED BY

" RAILROAD RENAISSANCE PROGRAM "

1GBPS

GOOGLE PROTOCOL OPTICAL BROADBAND FIBER NETWORKS

A major feature of this program is the linking of Railroad Stations in the US, Canada, UK, Europe, India and beyond to the new 1GBPS Broadband Networks via the railroad tracks to "walk-in" media centers which at the larger stations will also incorporate a high class limited menu café or restaurant. Many of these will be staffed by only one or two people, so extensive use of frozen meals will be necessary.

Can we deliver the quality required using mainly frozen food?
We think we can, and we are researching a range of solutions with a number of distinguished suppliers.
